Level does not always mean flat

If enclosures are not evenly installed, mounted, supported and secured, the body will twist and conform to surface it’s resting on and/or mounted too.

If the surface, wall or floor has highs, lows or any irregularities as most surfaces do, it will show up in the door alignment.

If the body of the enclosure is not even, your doors will look uneven.

**WALL MOUNTED ENCLOSURES**

**If latching side is high**
