CE Mark for the EU

**Issued By
Saginaw Control & Engineering
95 Midland Road
Saginaw, Michigan 48638**

The CE mark is a European Union (EU) compliance symbol for Conformity European. The CE mark indicates that the product complies with all European directives and essential harmonized standards of health, safety, environmental, and customer protection. The CE mark also promotes free trade movement outside and within the EU.

The CE mark is not intended to be applied to empty enclosures because enclosures are inactive components of a final assembly. The responsibility of ensuring compliance to applicable EU directives and harmonized standards belongs with the final equipment manufacturer.

Saginaw Control & Engineering's enclosures are designed in compliance with European standards (IEC 60529 Degrees Of Protection Provided By Enclosures) and are eligible to receive a manufacturer's declaration of conformity. This certificate only assists the equipment manufacturer in obtaining the CE mark.

Applicable European Directives:

2014/35/EU: Low Voltage Directive For Electrical Equipment Within Certain Voltage Limits.

2014/30/EU: EMC Directive Relating To Electromagnetic Compatibility.

The EMC directive is only applicable secondarily, since an empty enclosure does not produce electromagnetic interference.

2006/42/EC: Machinery Directive.
