

LIGHT SWITCH CONTACT BRACKET

OK-LSMB Overview

The OK-LSMB Light Switch Contact Bracket is used to extend the reach of the enclosure door so that it can properly engage the light switch. The bracket mounts directly to the OK Series door stiffening frame and provides the additional contact surface needed for proper switch operation.

Installation

1. Remove the existing LSA hardware and position the LSA and OK-LSMB on the enclosure as shown.

Figure 1

2. Install the LSA and OK-LSMB using the hardware provided in the LSMB bolt pack. The bolt pack includes replacement screws for the original LSA hardware and washers to secure the LSA to the enclosure.

*30 inch lbs of torque for screws

Figure 2 & 3

3. Verify switch engagement. With the door closed, the OK-LSMB should contact the light switch. Open and close the door to confirm proper operation.
